## Team Details

Team name: Model Citizens | Project: Irene

Team leader name: Debadrita Dutta

Problem Statement: Make therapy or therapist-led support more affordable, with a private first step for people who find it hard to ask for help.

**Note:** Please download this template to make your edits and submit the final version.

To download, go to File > Download > Microsoft PowerPoint (.PPTX). Kindly refrain from sending edit requests.

## Brief about the idea

**It began with a very personal hesitation.**

In college, I needed therapy. It was expensive.
I did not want to tell my parents because I knew they would worry.

FOUNDER EXPERIENCE · DEBADRITA DUTTA

**What if the cost could be shared, without having to begin in public?**

Irene is a working platform for private intake and therapist-led groups. With consent, Gemini helps organize a person's story; the person confirms it, a professional reviews it, and compatible participants can choose a group with an upfront shared session fee.

# Opportunities

## How is the idea different?

A private-to-group journey combines participant-confirmed AI summaries, practical matching, professional decisions and a visible shared fee.

## How does it address the problem?

Sharing a session fee can reduce the amount each person pays. Private intake lets someone explain their needs before deciding what to share in a group.

## USP: affordability, agency and human judgment together

AI prepares information. A therapist decides suitability. The participant chooses whether to join. The starting focus is college-age adults.

# List of features offered by the solution

## 01 A private first step

Consent, personal preferences, budget and a story shared with the chosen therapist.

## 02 AI you can correct

Gemini drafts the intake summary. The participant edits and confirms it.

## 03 A practical group fit

Availability, language, age band, region, sharing comfort and related goals.

## 04 A human decision

Verified professional access, intake review and explicit approval before invitations.

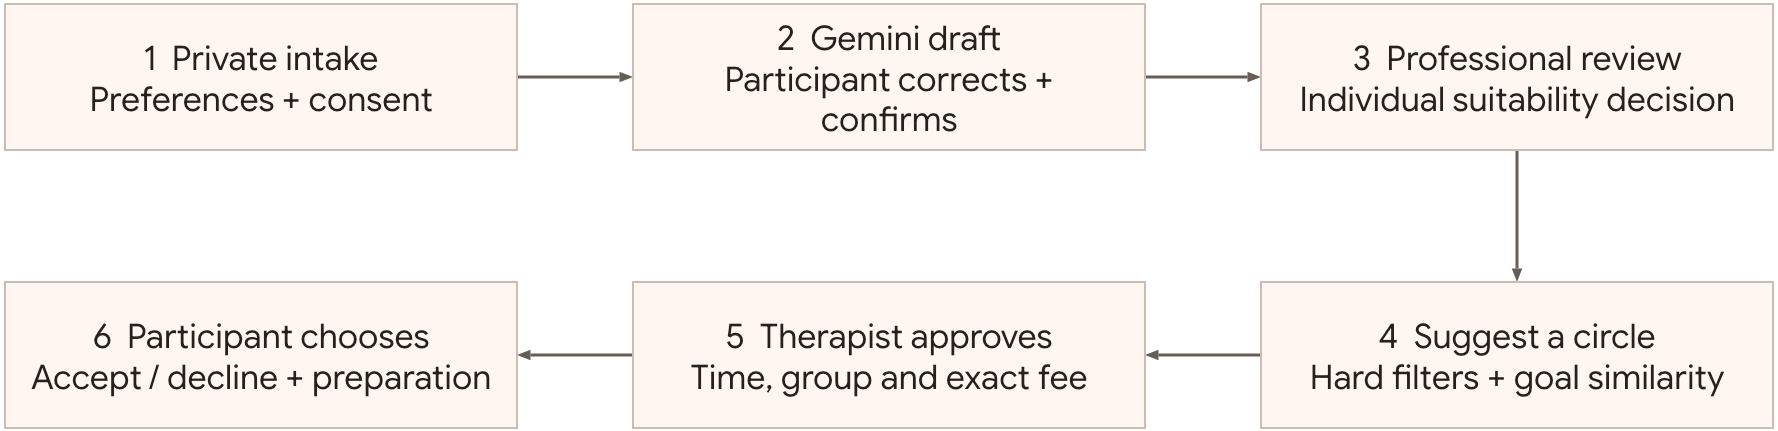

## 05 A clear, shared fee

An exact quote before acceptance, with the freedom to accept or decline.

## 06 Control after joining

Private preparation, calendar export, and intake data export or deletion.

# Process flow diagram or Use-case diagram

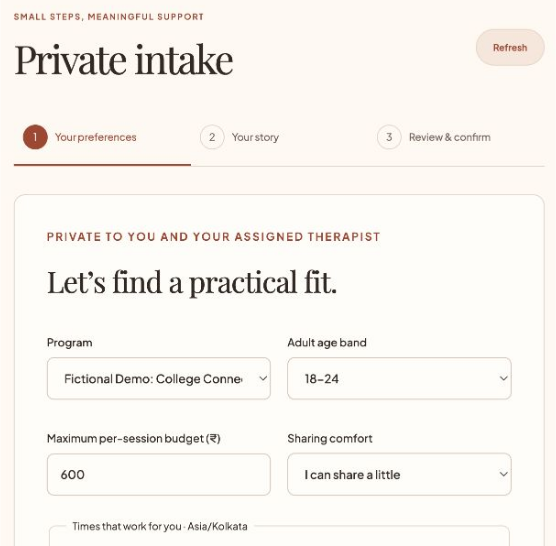

**High or uncertain review signals → excluded from routine matching for individual review.**

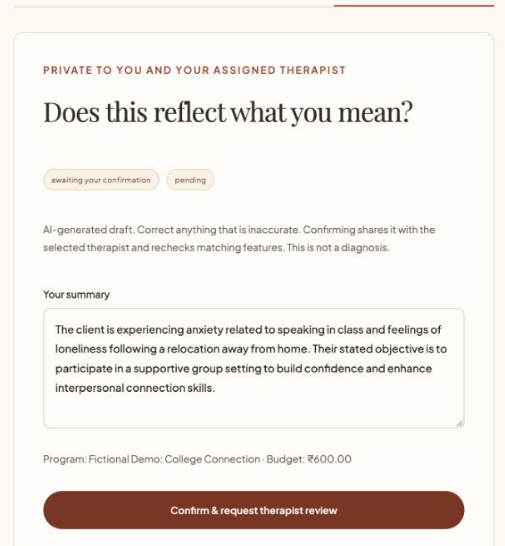

AI supports preparation; it does not diagnose, deliver therapy or make the final placement.

# Wireframes/Mock diagrams of the proposed solution (optional)

**Built interface: a calm first step, with control over what happens next.**

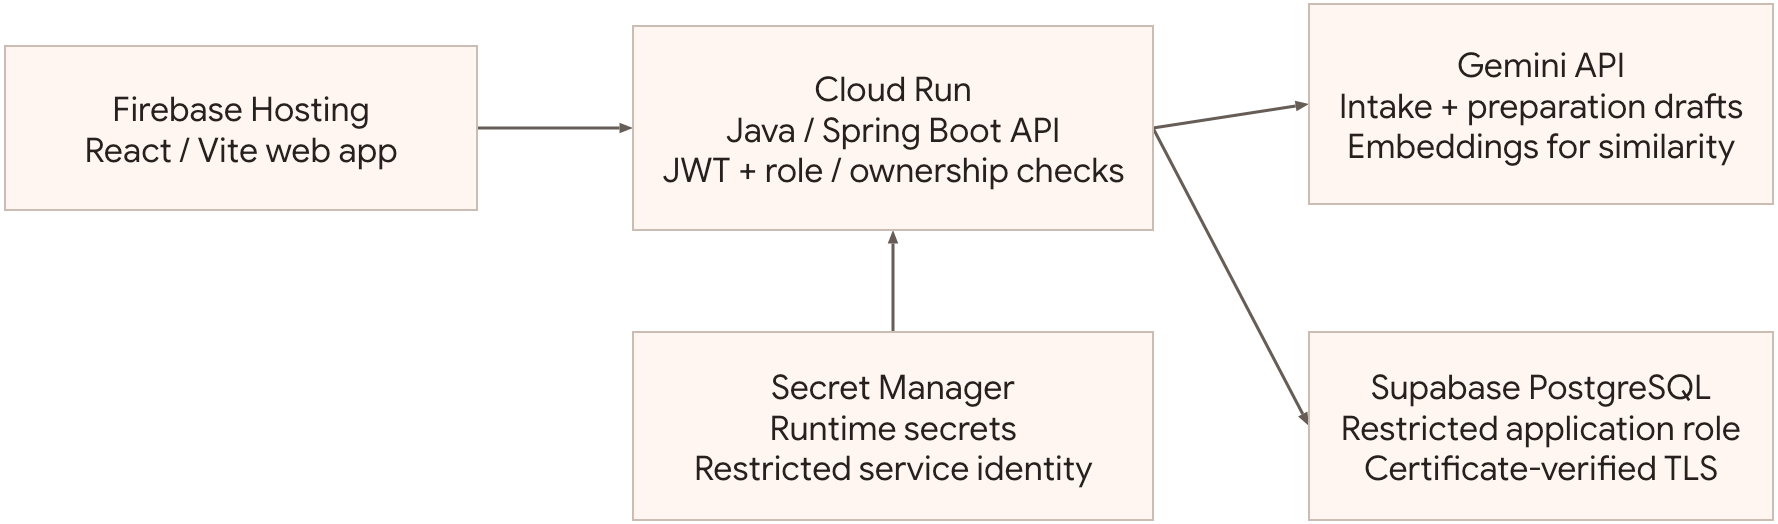

**Preferences before disclosure**

**An editable summary before sharing**

# Architecture diagram of the proposed solution

**Cloud Build + Artifact Registry → tested backend container → Cloud Run**

Firestore is not used. PostgreSQL is the system of record for the current implementation.

# Technologies to be used in the solution

| Technology | How Irene uses it | Status |
|---|---|---|
| Firebase Hosting | HTTPS delivery of the React / Vite web app | Live |
| Cloud Run | Spring Boot workflow, access checks and matching | Live |
| Gemini API | Draft summaries, facilitator preparation, embeddings | Live |
| Secret Manager | Database, JWT and Gemini secrets | Live |
| Cloud Build / Artifact Registry | Build, test and store the backend container | Used |
| Google Stitch | UI exploration and coral interface refinement | Used |
| Supabase PostgreSQL | Intakes, programs, circles and invitations | Live |
| Firestore | Not integrated; PostgreSQL stores application data | Not used |

# Estimated implementation cost (optional)

## Light-use deployment

Target: ₹0 while usage fits free allowances and trial credit.
Firebase Spark + Supabase Free; Google backend on trial.
Actual charges depend on usage; zero cost is not guaranteed.

## Shared-session illustration

₹2,400 total ÷ 4 participants = ₹600 per person.
The same total ÷ 6 = ₹400 per person.
Illustrative arithmetic; not market pricing or a clinical comparison.

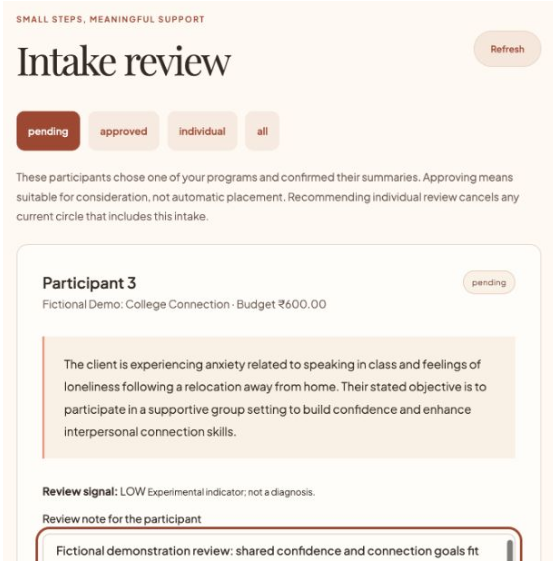

## Operating model to validate

A transparent coordination fee could fund operations.
Screening, preparation, unfilled seats and support must be costed before setting real prices.

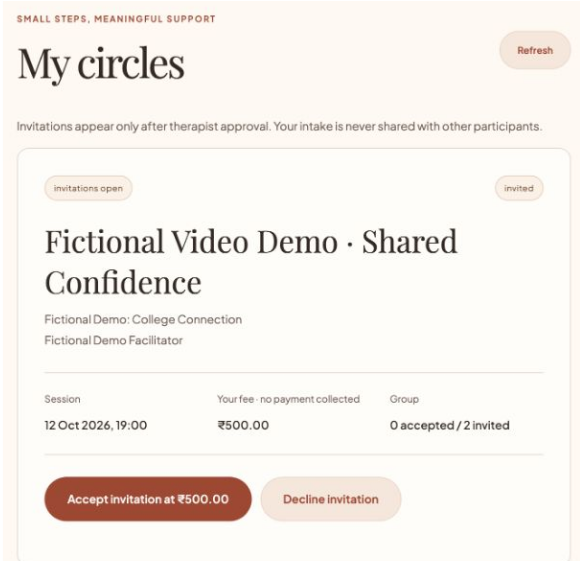

Cost controls: Cloud Run min 0 / max 2; ₹500 monthly budget alert. Alerts are not caps.

# Snapshots of the prototype

**A human reviews the fit. The participant makes the final choice.**

**Therapist review of a confirmed intake**

**A ₹500 quote with accept / decline**

# Prototype Performance report/Benchmarking

**30**

**Backend tests passed**

**6**

**Frontend routing tests**

**35**

**Live workflow checks**

## What was verified

Fictional intake → real Gemini generation / embeddings → therapist review → matching → group approval → fixed quote → acceptance → cancellation / deletion.

## What this evidence does not establish

Clinical suitability, crisis-detection accuracy, real-user outcomes or high-load performance. The next evaluation should measure affordability, access and participant control.

# Additional Details/Future Development (if any)

## Next: establish safe, appropriate group criteria

Work with qualified clinicians on suitability, consent, escalation and the limits of AI. Evaluate labelled fictional cases before considering any service trial.

## Then: validate access and economics

Explore campus counselling and nonprofit pilots. Measure out-of-pocket cost, time to an appropriate group, attendance, comfort and therapist preparation time.

## Grow only after the foundations are tested

Validate sustainable pricing, accessibility and language support. Add paid sessions and stronger operational governance only after professional and user review.

## Why this belongs in Sustainability & Social Impact

# The first step towards support should not feel out of reach.

For someone worried about the fee.
For someone protecting their parents from worry.
For someone who wants to speak, but needs to begin privately.

Our intended impact: a lower financial barrier, more choice over disclosure, and a path into professionally guided community.
